

MT.COX LLC

the exchange of culture —
mathematics of the trenches

the problem

- - insiders farm 90% before launch
- - cexes skim 2–5% while dumping
- - bagholders = exit liquidity
- graph: retail portfolio goes straight down

the pain (math)

- $\$100 * (1 - 0.90) = \$10 \rightarrow 90\% \text{ drawdown}$
- no memes, no culture, no hope

the solution: mt.cox math

- - redistribution: 30% → bagholders
- - buy & boost: 20% → cock energy
- - chaos incentives: 10% → trenches
- total = 60% back to trenches

cock with suit theorem

- Trench Utility (TU) = $\text{Memes}^2 + \text{Cock Energy} \div \text{Rug Risk}$
- - memes² → viral posts amplify value quadratically
- - cock energy → reserves of chaos funding
- - rug risk → minimized (we promise nothing)
- thus, TU → ∞ as memes → ∞

tokenomics

- ticker: \$mtcox
 - supply: infinite (like cope)
 - meme tax: 1%
 - cock tax: 1%
-
- $EV = (100 * 50) - 2 = 4,998$
 - mathematically funnier than dog wif hat

roadmap

- Q1 2025 — launch broken site → 10k meme posts
- Q2 2025 — competitions → \$1m redistributed
- Q3 2025 — buy & boost events → 20% supply shock
- Q4 2025 — cockposting engine v2.0 → 69,420 memes/min

call to action

- “the trenches needed a runner. here you go.”
- #mtcoxllc #forthetrenches
